INTERPRETIVE COMMENTS

Multiple lipid abnormalities consistent with mixed dyslipidemia. LDL-C 158 mg/dL is borderline-high; HDL-C 48 mg/dL is below the female desirable threshold of 50 mg/dL; Non-HDL-C 184 mg/dL exceeds the <130 mg/dL goal. Triglycerides 178 mg/dL are borderline-high. Per 2018 ACC/AHA Cholesterol Clinical Practice Guideline, consider intensification of statin therapy in patients with diabetes mellitus and ASCVD risk factors.

Reference ranges per NCEP ATP III; clinical decisions should be individualized. This report is for the use of the ordering provider only.
